

RemoteGUARD provides secure back-to-base monitoring between your premises and your monitoring centre.

RemoteGUARD combines the following:

High-resolution camera technology

The RemoteGUARD solution uses, exclusively, the MOBOTIX camera range for its superior features and capabilities

A highly secure network for video and alarm transmission between the customers premises and the monitoring centre

An integrated software program installed in every RemoteGUARD monitoring centre for receipt of video alarms and secure access to customer cameras onsite

RemoteGUARD is Australia's first choice for high-security, back-to-base video monitoring.

Secure Remote Video Monitoring

Remote Virtual Patrols save you time and money

RemoteGUARD Virtual Patrols enable your site to be monitored in the event of motion detection and also at scheduled times by trained staff at a remote security monitoring centre. It is an effective alternative, with added advantages, to physical guard patrols and provides instant high-resolution verification of motion detection.

Security-Vision-Systems

Powered by MOBOTIX camera technology.

Monitoring centre operators can conduct virtual patrols in two different ways:

Multi-View Patrols

Multi-view patrols allow operators to monitor multiple areas from multiple cameras, at the same time, through one intuitive split-screen display. Multi-view is a cost-effective way to patrol sites with a large number of areas and ensures operators don't miss any activity when patrolling many camera views.

There are two different types of virtual patrols that an operator can conduct:

Pre-Scheduled Patrols

Virtual patrols can be conducted at regular and timed intervals on an hourly, daily or weekly basis depending on your specific requirements. Pre-scheduled patrols are perfect for sites that require regular or after-hours patrols or when physical guards are not on site.

Alarm Response Patrols

Alarm response patrols are conducted in the event of movement detection and are useful for verifying the authenticity of alarms at the time of the event, rather than waiting for a guard to arrive.

Walk-Through Patrols

RemoteGUARD enables operators to conduct a virtual walk-through of your site using a pre-defined sequence of camera views. Walk-through patrols are a cost saving alternative to physical guards.

Extra Benefits

Non-Physical Access

Give operators access to areas you wouldn't give a physical guard for safety or security reasons, such as medical labs, storage areas, safes etc

Two-Way-Voice

Deter would-be intruders before any damage is done. Operators can communicate with anyone visible via the MOBOTIX cameras on-site through the built-in speakers and microphone.

Remote Access Control

Operators can grant remote access to authorised personnel after identifying and communicating with them via the MOBOTIX cameras. This feature is perfect for sites that have after-hours staff, cleaning crews and delivery trucks.

Detailed Reporting

Advanced automated reporting lets you:

- See all access details for patrols for each site and camera
- See the length of each patrol or camera access
- See the data usage for each patrol or camera access
- See the operator notes for each patrol or camera access
